

Over the last few years vehicle safety devices such as extra mirrors or camera monitor systems with wider viewing angles have become mandatory. However, despite an increase in all-round visibility, fixed objects remain high.

Even a relatively small accident can be immensely costly to a fleet operator. Apart from repairs to the damaged vehicle, there is downtime and replacement vehicle hire costs to consider and this doesn't take into account any insurance or legal expenses.

Typical damage costs based on a Mercedes Actros:

- **Item Cost of replacement Step (bottom part moulded) £295 - £585**
- **Bumper - two corners and centre £248**
- **Whole Front light cluster £246**

SMUK Step-Guard is fitted to nearside cab step giving awareness to the driver of objects when turning and reversing. Minimises the risk of damage to the vehicle from otherwise unseen objects.

- **2 sensor system**
- **Flush mount sensors**
- **0.6 or 1.0m detection range**
- **Two levels of detection sensitivity**
- **System activated by speed switch**
- **Gives peace of mind to the driver**
- **Minimises damage to vehicle, property and other objects**

These systems are now the number one choice for leading fleets in the country.
