

COMMERCIAL VEHICLE SAFETY SYSTEMS

- TARMAC

SM UK are commercial vehicle safety specialists, who have been leading the industry for over 20 years. As safety is a top priority, Tarmac have engaged with SM UK to provide drivers with everything they need to operate as safely as possible on the roads and on sites around the UK.

CAMERA, SENSOR AND MONITORING SYSTEM

At Tarmac reducing blind spots and keeping personnel safe is of a high priority – When manoeuvring, these blind spots present a significant danger to anything or anyone in the vehicle's path and inhibit the driver's ability to operate the vehicle safely.

Mandatory Fit:

- 5 Camera System
- 360 degrees
- Rear Camera
- Load Camera
- Sidescan 7 sensors (Why not upgrade to Radar Predict)

BODY WATCH

The body watch in cab and external detector is designed to alert the driver when moving off that the body of their tipper is still raised.

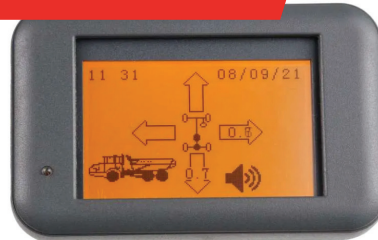

- Prevents tipper body from being raised above a pre-set speed limit.
- Indicates to the driver if the tipper body is raised with an audible/visual warning at all times.
- Sounds a very loud audio/visual warning if the vehicle exceeds a pre-set speed limit with the tipper body raised and prevents the tipper from being raised further.
- Prevents accidental activation of the tipping system.

TYRE PRESSURE WARNING SYSTEM

All tyres will naturally leak air over time, but with our TPMS it maintains a constant check on your tyre pressures, enabling you to keep them at the correct level. You'll receive a proactive maintenance alert when a tyre needs topping up with air – helping you to maximise fuel efficiency, optimise tyre life and improve road safety.

HIGH VOLTAGE DETECTOR

High Voltage Detection Systems and Inclinometers must be installed to your tipper, so that when operating and unloading, drivers can be certain that there are no surrounding dangers.

Tipper high voltage detection systems has been designed to prevent vehicles and machinery with a variable height from coming into contact with high voltage overhead power lines. The system consists of a cab mounted detection antenna and an in-cab audio/visual warning unit

LED STROBES

LED strobes to the front and rear, and two work lamps activated with reverse complete your lighting upgrades.

TRUCK DOOR WINDOWS

Truck Door Windows are a valuable addition to any HGV fleet, giving drivers extra visibility on their nearside often referred to as a blind spot. The truck door windows we fit are ideal for Direct Vision compliance and provide the truck driver visibility lower down the door on the left-hand side of the truck where Vulnerable Road Users (VRUs) often appear.

This installation leaves the passenger side window operable, opposed to a fixed solution from factory

4FT SLIMLINE BEACON BAR

4ft Slimline Beacon Bar, low profile LED beacon Bar with clear lens, providing easy detection for others when on worksites with poor visibility.

HANDBRAKE WARNING SYSTEM

The Handbrake alarm will sound when a door is opened, and the Handbrake is not applied. This is to help stop issues with roll away vehicles.

(4W) Speaking Handbrake Warning Alarm (Single Message)

COMMERCIAL VEHICLE SAFETY SYSTEMS - TARMAC

WARRANTIES / SERVICING

Your safety systems will come with an unparalleled 3-year warranty, giving you the peace of mind that you have invested in premium equipment, installed to an exceptionally high standard, and backed up by a first-class service.
