Why choose SM UK?

SM UK is established as a trusted partner for the supply and installation of Fleet Safety equipment to Fleet Operators across the UK. Our comprehensive service makes a seamless procurement option for operators with multi-asset fleet types looking for an all-in-one solution.

We pride ourselves on our commitment to Quality, Professionalism and the High Standards of workmanship that we deliver.

We care about your business, and we care about an ethical approach to a working partnership. Our approach is built on a philosophy of sustainability, sustainable resources, sustainable relationships and sustainable business.

We understand each client is different. We invest the time in getting to know you, your fleet and your operation so that we can align solutions that are fit for purpose and that bring you a return.

How we work

Investment in proven technology

We stay at the forefront of the ever changing landscape of Fleet Safety. With so many products available on the market, we invest our time in testing and choosing proven, lasting, fit-for-purpose and of course, compliant technologies.

Quality & Professional Workmanship

We have earned our reputation as a business that is all about quality. We have achieved this through our many years of hard work, diligence and professionalism.

Nationwide Installation Team

With over 60,000 ft² of dedicated workshop space across three sites you can have peace of mind that your install will go ahead, whatever the weather. Our safe working space also removes the risk of damage to your vehicle. On top of this, we have our own team of mobile engineers meaning we can service the length and breadth of the country.

Customer Centric Approach

We know that the nature of the work we do means sometimes unexpected and unplanned challenges present themselves. It is during these times that our customers appreciate our commitment to success, we are on hand to support you every step of the way.

Type Approval

If you're adding new trucks to your fleet, using a safety system installer with Type Approval is going to save you a lot of time, money and effort. You receive your truck ready-to-go from day one with the peace of mind that it is fully compliant.

SM UK currently hold:

- **Stage Two Type Approval for 2 & 3 Axle Tractor Units**
- **Stage Three Type Approval for 4 Axle Rigid Vehicles**

This is only possible due to our close working relationship with the VCA, and highlights the professionalism of our installation team.

Total Fleet Solutions

“With over 25 years of industry knowledge and experience, SM UK are well placed to provide a tailored comprehensive solution designed to meet these challenges head-on”

Steve MacDonald - Chairman, SMUK

At SM UK, our expert team provide future proof technologies to ensure road safety compliance, including the latest AI-driven innovations and comprehensive regulatory solutions such as Direct Vision Standard (DVS), Construction Logistics and Community Safety (CLOCS), and Fleet Operator Recognition Scheme (FORS).

A Comprehensive Fleet Management Approach

Road Safety and compliance of HGVs are paramount, as is the health of your driver. Our integrated solutions offers:

- **Advanced Safety Technologies:** including Stream, Radar, Cameras, Sensors and recording systems all designed to alert and protect the driver.
- **Reverse Smart Systems:** Cutting-edge technology that will brake automatically when reversing if the driver fails to see a potential VRU.

- **Moving Off Information Systems (MOIS):** Advanced alerts to prevent incidents during a vehicle's initial stage of movement.
- **Radar Side Scan:** Sensors that detect and alert drivers to predictive potential collisions.
- **Fleet Dash Cameras:** High-definition recording systems for accident documentation and driver coaching.
- **Stream:** A fully integrated telematics framework all on one platform.
- **In-Cab Comforts:** Such as a TV, Fridge, Bed and Locker Units all add to driver comforts and can reduce driver fatigue.
- **Beacon Lighting:** Enhanced safety and greater visibility from Beacon Bars to our own low-level lighting system; Halo®.
- **Cat Walks:** Safer access for drivers during vehicle maintenance tasks and eliminates the opportunity of fuel theft.

Services for your Whole Fleet

Whether you're a small enterprise or a large corporation, our expertise extends beyond the HGV sector, offering a full range of van services, tailored to optimise your operations:

Total Fleet Solutions

“Expanding into vans was a natural evolution. We realised our fleet expertise could serve a much broader range of commercial vehicles, from safety systems to complete custom conversions.”

Steve MacDonald - Chairman, SMUK

- **Tailored Racking Solutions:** Custom racking configurations that maximise space and efficiency.
- **Livery and Branding:** Distinctive designs that enhance brand visibility, recognition and safety.
- **Electrical Systems and In-Vehicle Technology:** Advanced systems to support your operational needs, including independent onboard power & lighting.
- **Specialist Vehicle Builds:** Custom-built vehicles designed to meet unique industry requirements.
- **Vehicle Sourcing:** We have converter terms with most OEMs, and can source your vehicle and assist with lease finance.

After-Sales Support

Our commitment to customer satisfaction doesn't end when you drive away. Covered by our warranty and backed up by our dedicated customer service team, you have peace of mind that all our work is carried out by our own in-house engineering team. We do not use subcontract engineers, which means we have

full control over the quality and reliability of your installation.

We take great care to follow strict manufacturer guidelines when installing equipment to your vehicles, protecting your vehicle warranty.

So... Why Choose SM UK?

SM UK sits right there alongside you to simplify your fleet management operation, offering smart, stress-free solutions that powers your business. Choosing SM UK means partnering with a team dedicated to driving your success.

We provide not just services but a commitment to excellence that will transform your fleet operations.

A Holistic Approach to Vehicle Management

With SM UK, you're not just choosing a service provider - you're gaining a partner, committed to the success of your business. Our holistic approach to fleet management integrates advanced technology, expert guidance, and dedicated support to optimise your fleet performance.

Stream

Introducing Stream

Stream combines telematics with advanced recording and camera technology to provide comprehensive fleet management. This innovative solution enables businesses to monitor vehicles and drivers in real time, delivering valuable insights that improve safety, efficiency, and compliance.

Compatible with all systems, Stream integrates multiple data streams—GPS tracking, vehicle diagnostics, driver behaviour analysis, and video footage—into one easy-to-use platform, accessible on any device that can browse the internet.

Key Features and Benefits

Stream's **real-time video monitoring** provides fleet managers with live road views. This feature improves driver safety by identifying unsafe behaviour before accidents occur. Video footage also serves as crucial evidence, helping resolve disputes and claims quickly in case of an incident.

Stream excels in **vehicle tracking and diagnostics**, providing real-time data on geofencing, vehicle location, speed, and condition, as well as walk-around checks. This enables managers to optimise routes, reduce fuel consumption, and schedule proactive maintenance, cutting operational costs while extending vehicle lifespan.

Driver behaviour analysis monitors factors such as harsh braking, acceleration, and cornering, providing feedback that promotes safer, more efficient driving habits. This leads to fewer accidents, lowers insurance premiums, and enhances brand image.

Compliance and Reporting

Stream helps businesses maintain industry compliance through comprehensive reporting capabilities, ensuring companies have necessary data for audits and reducing the risk of fines. Detailed reports identify performance improvement areas, contributing to long-term operational success.

Collaborations

OXALIS hosts successful demonstration of advanced safety systems

OXALIS invited us to their headquarters for a demonstration of the Brigade Radar Side Scan and Front Moving Off Information System. This event showcased these cutting-edge safety systems' effectiveness in preventing collisions and protecting vulnerable road users.

Our team worked with OXALIS drivers, explaining system functionality and benefits. The demonstration allowed drivers to witness how these technologies enhance safety by detecting obstacles and providing real-time alerts.

The collaboration between OXALIS, SM UK, Brigade, and driving staff was highly successful. Drivers now have sophisticated safety systems on their tankers, expected to save lives and reduce accident risk.

We are proud to have participated in this initiative and look forward to continuing our efforts to improve road safety through innovative technology.

Mitchells leads the way with new electric vehicles

Mitchells of Mansfield is pioneering the use of electric vehicles in the UK's distribution sector.

Safety System

Equipped with a full Halo® System from SM UK, the truck includes front, rear, and side cameras, enhancing safety for both drivers and nearby road users. These features ensure the vehicle is qualified to operate in Low Emission Zones (LEZ) and Ultra Low Emission Zones (ULEZ), supporting Nottingham's goal to become carbon-neutral by 2028.

At Mitchells, we are determined to continue improving our practices to help our planet and community, leading the way in sustainable as well as safe transportation.
